# Reverse a Linked List Java

Reverse a Linked List without using extra space.

```
Old List
1 -> 2 -> 3 -> 4 -> null
New List
4 -> 3 -> 2 -> 1 -> null
```

#### **Iterative Method**

Time complexity - O(n)

Space complexity - O(1)

```
public void reverseList() {
    if(head == null || head.next == null) {
        return;
    }

    Node prevNode = head;
    Node currNode = head.next;
    while(currNode != null) {
        Node nextNode = currNode.next;
        currNode.next = prevNode;
        prevNode = currNode;
        currNode = nextNode;
    }
    head.next = null;
    head = prevNode;
}
```

### **Recursive Method**

Time complexity - O(n)

Space complexity - O(1)

```
public Node reverseListRecursive(Node head) {
    //empty node || last node or only one node
    if(head == null || head.next == null) {
        return head;
    }

    Node newHead = reverseListRecursive(head.next);

    head.next.next = head;
    head.next = null;
    return newHead;
}
```

### **Collections Method**

Time complexity - O(n)

Space complexity - O(1)

```
LinkedList<Integer> list2 = new LinkedList<>();
    list2.add(1);
    list2.add(2);
    Collections.reverse(list2);
```

## **Homework Problems**

- 1. <a href="https://leetcode.com/problems/swap-nodes-in-pairs/">https://leetcode.com/problems/swap-nodes-in-pairs/</a>
